Version 1.0.0.1

January 13, 2023

This is the initial release of the **TraxTi** application. Below the several features that this app offers are outlined. It reads the object collections in STIXX format from the open feed supplied by: <https://cti-taxii.mitre.org/taxii>

The app uses the information as provided by MITRE but is in no way endorsed or certified by the MITRE.

- Taxii server and Collections/Bundle view: This view provides the information as presented by the Taxii server at: <https://cti-taxii.mitre.org/taxii>. It shows the server information and the available collections.
- Objects View: on selection of a collection the relevant objects information is downloaded and presented. Included are all available object types as defined by the STIX specification.
- Object details view: this view provides the details of all attributes relevant for the selected object.
- Settings. In the menu contact- and application details can be found. Als support and appearance settings are available.
